

AIRCURE

DESIGNING CLEAN AIR FOR LIFE

AIRCURE products contribute positively to your Triple Bottom Line with products that are cost-effective, make real positive impact on the environment and people's health.

The **triple bottom line** framework has three parts - people, planet and profit. These are the three pillars of sustainability, and AIRCURE products tick all three boxes with products that are cost-effective, energy efficient, and provide healthy clean air for people.

- ✓ Reclaimed Containers: Reduce costs and impact on environment. This not only 'ticks the box' for cleaning the environment, it also conforms to the 'Reduce, Reuse, Recycle' philosophy. AIRCURE gives it a **higher purpose** and a new life - instead of simply removing a problem
- ✓ Green Ducting: All pipework/ducting/foot mountings made from used 40-gallon steel drums
- ✓ Green mountings: Anti-Vibration mountings for fans, formed from discarded car tyres
- ✓ Solar: Optional solar panels for all internal lights and controls
- ✓ Redesigned fans: Redesigned fan blades and construction to optimise on energy efficiency. 20–25% reduction in actual energy use.
- ✓ Green filters: Filters created from recycled materials
- ✓ Re-used shipping pallets: Loose spare parts shipped on re-used pallets
